

## Exchange search and restoration simplified.

**SIMPLE, YET POWERFUL.** If you needed to find a single email message or mailbox in your backups, how long would it take? If the very thought of needing to locate and restore messages or mailboxes makes you cringe, Ontrack® PowerControls™ is the perfect solution. It reduces the time and cost of email restoration, wherever your data resides - on-premises, in backups or hybrid cloud environments.

Simply put, Ontrack PowerControls dramatically cuts the time and expense normally associated with restoration.

### Ontrack® PowerControls™ for Microsoft® Exchange Server

- Eliminate the need for brick-level backups or Exchange recovery servers
- Search, recover, restore and export Exchange Server archived and recoverable items
- Restore items directly to your production Exchange server, Office 365 mailbox or directly to a PST file from your backups
- Simplify email management tasks such as Exchange server migration, mailbox creation or archiving Office 365 mailboxes
- Granularly search, collect, and export content in a forensically sound manner

### Common reasons for restoration

Ontrack PowerControls dramatically cuts the time and expense normally associated with Exchange item restoration. For example:

- You experience an Exchange server outage and you need to retrieve all messages since your last backup
- Find deleted messages or folders for internal clients
- A key employee has left your company and you are asked to recover messages that meet specific criteria
- Automate the copying of mailbox data when migrating to a new Exchange server
- Quickly identify and collect relevant information for litigation or regulatory requests

Compared to native Exchange restore methods, the time and hardware costs saved by utilising Ontrack PowerControls to conduct email recovery and restoration, data collection, and migration yield an ROI well beyond the cost of the tool itself.

Start saving time and money today with Ontrack PowerControls for Exchange.
