

Get your data back with Freeval

Discover what data is recoverable quickly, easily and without commitment.

Freeval is a quick and straightforward data recovery service for HDDs, SSDs, servers, smartphones and tablets that gives you a free evaluation before committing to the recovery. Benefits include:

Free consultation

- We will assess the data loss, determine the most cost-effective solution and advise on the next steps.

Free in-lab media evaluation

- We will provide an expert inspection of your media, create a free analysis report detailing the specifics of the data recovery case and propose recovery options with a fixed pricing quotation.
- The free evaluation can take as little as 4 hours, depending on the media (see overleaf for more details).

Expert data recovery process

- We will overcome internal and electromechanical problems with your media in order to image the raw data, rebuild the file structures from the image and recover the data. Overcome the logical issues and complete the diagnosis.

Secure return shipping

- Once recovered, we will return the data on an encrypted media, ship the data via next day courier or organise a secure online file transfer and help you to ensure data is successfully restored.

* Provide an expert inspection of your media on an average 4 hours of the media arriving at our labs.

Why trust Kroll Ontrack with your critical data?

- We are pioneers in data management. Kroll Ontrack performed the world's first data recovery in 1987.
- We have an unrivalled investment in R&D to produce unique data recovery solutions to address any situation.
- We have a global reach, a large range of proprietary tools and techniques, and 24/7/365 availability.
- We are the most trusted name in data management - every year we perform 50,000 data recovery jobs globally.
- We are security compliant. Twice awarded by the US Department of Defence for outstanding security participation.

A recovery service for any data loss situation.
